SURVEY CIVIL MEP

Since 1992, Baird, Hampton & Brown, Inc. is proud to have played a major role in enhancing the infrastructure “backbone” for cities, counties, and other municipal entities along with private developers, contractors, and other private entities throughout Texas by delivering timely and cost effective survey solutions. We support growth and expansion while carefully preserving natural resources for future generations.

We specialize in boundary, topographic, construction and route surveying. In addition, our capabilities include the ability to coordinate aerial mapping of large tracts for horizontal and vertical control, perform utilities research, field verification of existing utilities, and provide complete mapping for the survey. We also utilize the latest robotic instruments and GPS technology. Our success is rooted in the successes we have achieved for our client partners and our commitment to the communities that surround us through philanthropic service.

Contact us today for more information on how we can meet your needs.
